RE: California Proposition 65 Information

Dear Valued Customer:

As part of our product stewardship and regulatory compliance efforts, we continue to monitor potential regulatory, safety, health and environmental impact of our products. California Proposition 65 (Prop 65), known as the Safe Drinking Water and Toxic Enforcement Act requires business to provide warnings to Californians and others doing business in the state, about significant exposures to chemicals that are known to cause cancer, birth defects or other reproductive harm. The law also requires companies to provide a warning on or with their products if they contain any of these chemicals. Ryerson provides a required warning on the customer delivery paperwork.

The warning does not mean the products will inevitably cause cancer or reproductive harm. Prop 65 is defined as a Right to Know law. It is important to understand that even though the product may contain the Prop 65 listed chemical, it does not mean the use of the product will cause any adverse health effects, nor does it mean that a product is violating safety standards or regulations.

Ryerson continuously reviews the list of chemicals and the composition of our products and works with a third-party compliance partner, Assent Compliance, to ensure compliance with the current regulations. Chemical information related to our products can be found on our safety data sheets (SDS) that are supplied to our customers and available on our website at [Environmental Health & Safety - Ryerson](#). For compliance requests regarding specific products sold to you by Ryerson, please access Ryerson's dedicated portal at <https://request.assentcompliance.com/ryerson>.

For additional information regarding Prop 65, please visit <https://www.p65warnings.ca.gov/> .

Sincerely,

Aimee Nash
Director of Environment, Health and Safety
